SUMMARY

Computer Science graduate with hands-on experience in Linux, Docker, cloud deployments (AWS, Railway, Vercel), and CI/CD pipelines. AWS Cloud Foundations certified. Able to deploy production-grade infrastructure, automate workflows, and troubleshoot server issues. Eager to contribute to DevOps operations with a strong growth mindset and practical project experience.

TECHNICAL SKILLS

Programming	Python, Java, C, OOP, Data Structures & Algorithms, Html, CSS, React.js , Django, Django REST Framework, PostgreSQL
Linux & OS	Ubuntu Server Admin, Bash Scripting, Shell Commands, Process Management
Containers	Docker, Docker Compose, Container Lifecycle, Image Management, Deployment
Cloud	AWS (EC2, S3, IAM, VPC) – AES Certified Railway, Vercel, GCP & Azure (exposure)
CI/CD & Git	GitHub Actions, Git/GitHub/GitLab, Version Control, Branch Management
Networking	DNS, Firewalls, SSL Certificates, Port Management, HTTP/HTTPS, REST APIs
Databases	PostgreSQL, MySQL – Schema Design, Query Optimisation
Monitoring	Server health checks, uptime monitoring, log analysis, backup management
Scripting	Python, Bash – Automation scripts, API integration, DevOps tooling

PROJECTS & DEVOPS EXPERIENCE

TrendKart — Full-Stack E-Commerce Platform | Solo Project 2025 – 2026

- ▶ Deployed full production infrastructure: Django REST API on Railway (Linux containers), React frontend on Vercel, Android APK via Expo EAS — managing DNS, SSL, environment variables, and uptime across all platforms.
- ▶ Integrated Cloudinary (CDN-based image storage) and Twilio (SMS OTP) APIs — handling third-party service configuration and API key management in secure environments.
- ▶ Built role-based access control (3 user types) with JWT authentication — implementing security best practices for API endpoints and server-side access management.
- ▶ Designed and optimised PostgreSQL database schema; managed migrations and query performance for a live multi-user platform.
- ▶ Built multi-platform system (REST API + 2 web apps + Android app) with consistent uptime, version-controlled via GitHub with structured branching and deployment workflows.

WildAware — Wild Animal Intrusion Detection System | AI/ML Project Dec 2024 – Jan 2025

- ▶ Deployed real-time ML inference pipeline on Google Colab; managed GPU configuration, model versioning, and dataset pipelines using Roboflow (1,000+ images).
- ▶ Achieved 92.4% mAP, 91.7% precision, 93.1% recall; built Python automation scripts for real-time alert notifications.

DIGILAB — Digitalized Lab Management System | Academic Project Dec 2023 – Jan 2024

- ▶ Built secure Django web app with MySQL backend; implemented authentication, attendance automation, and an admin reporting dashboard.

CERTIFICATIONS

- ☑ **AWS Solutions Architect – ML** — Entri Learning | Kerala | 2026
- ☑ **B.Tech – Computer Science Engineering** — APJ Abdul Kalam Technological University | 2025
